Diesel Alternator Tachometers	T	alternator
NOTE: Alternator <i>must have an AC tap</i> , usually marked "AC", "R" or "W". If such a tap is not present, a local alternator repair shop can usually add one. Also, you will need to know the number of magnetic poles in your alternator. Consult the alternator maker or local alternator repair shop if you do not know this. Also, you will have to calculate the pulley ratio from crankshaft to alternator. Tachometers are factory calibrated for several combinations of poles and pulley ratios, but in almost all cases you will need a Portable Master Shop Tachometer for initial calibration. See the Diesel Alternator Tach Guide in the Tech Reference section for calibration and switch settings.		

Water Pressure (0-15/0-30/0-60 PSI):	WP	with gauge
<i>(Water Pressure Gauge Kits contain gauge & parts shown at right.)</i>		
NOTE: For Yamaha, also order adapter P/N 61886P.

Depth & Temperature Gauge Transducers:
For 1997-date 2" Teleflex In-Dash Depth & Temp Gauges (600'):

Transom Mount Depth/Water Temp. Sensor	BA	61219P001
In-Hull Depth Transducer	BB	61225P
10-Foot Transducer Cable Extension		61319P

NOTE: Depth and Depth/Temp transducers listed use a 200 MHz signal and are for Teleflex depth instruments only.

NOTE: In-hull transducers are not suitable for metal or wooden boats, where lamination exceeds 3/4" (19mm) or contains foam, Kevlar®, aricore or wood flotation/reinforcing. These transducers must be epoxied in place without any gaps or voids in the epoxy or hull, or they will not function properly.
